

Ganga -Yamuna Sangam in Prayagraj as viewed in 1975, 1997, 2013 & 2025

(Based on the GIS analysis of Survey of India Topographical Mapsheet of 1975 & Premonsoon Satellite images of 1997, 2013 & 2025)

Observations about River Channel Changes :

Multitemporal satellite remote sensing and GIS based comparative examination of Ganga-Yamuna Confluence (Sangam) for 1975 - 2025 period indicates that there has not been a significant change in the channel position at the Sangam. However in the upstream of Sangam the Ganga river has been witnessing oscillatory migration with in the broad active flood plain whereas the Yamuna River has remained more or less unchanged.

Legend

- River Channel in 2025
